PROFESSIONAL SUMMARY

SDET with 5+ years in QA and test automation across functional, regression, integration, API, and end-to-end testing. At NDG Communications I designed and built a Playwright + TypeScript framework from scratch: ~120 E2E tests across 4 product surfaces, critical-path coverage raised from 0% to 65% in 6 months, ~8-minute sharded GitHub Actions runs, and a move from bi-weekly to weekly releases with zero production rollbacks. Strong in JavaScript/TypeScript, API testing (Postman, REST Assured), and data validation across PostgreSQL, MySQL, and MongoDB. Earlier roles: 35% fewer production bugs at WTEC Energy and contributed to 92% JaCoCo coverage across 14+ microservices at CI&T. Hands-on and growing in AI-assisted QA: AI agents that support test-case creation and Playwright automation, LLM evals (in progress), and LangChain + RAG internal tools. Comfortable working fully remote with distributed teams.

CORE SKILLS

- **Languages:** JavaScript, TypeScript, Java, SQL
- **Test Automation:** Playwright, Jest, Page Object Model, Cucumber / Gherkin (BDD)
- **API Testing & Debugging:** Postman, REST Assured, Chrome DevTools
- **Testing Types:** Functional, Manual & Exploratory, Regression, Integration, API, End-to-End, Performance
- **Test Strategy & Management:** Test planning, test strategy design, quality gates, release-readiness sign-off, Zephyr Scale, Jira
- **CI/CD & Tooling:** GitHub Actions (parallel sharding, quality gates), Docker, Git
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Systems Tested:** .NET, Node.js, and Java microservices; React web apps; CMS platforms
- **Methodologies:** Agile (Scrum, Kanban)

Familiar with: Cypress, Selenium, Appium, JUnit, JMeter, k6, Dynatrace, New Relic, Jenkins, Bitbucket Pipelines, Azure DevOps, AWS, Python

AI-assisted QA (hands-on, growing): AI agents for test generation, LangChain, RAG, prompt engineering, LLM evals (in progress)

PROFESSIONAL EXPERIENCE

Software Development Engineer in Test (SDET) — NDG Communications · Remote
Jun 2025 – Present

- Designed and built the company's first test automation framework from scratch with Playwright + TypeScript (Page Object Model, reusable utilities), covering 4 product surfaces with ~120 E2E tests.
- Raised automated critical-path coverage from 0% to 65% in 6 months.
- Set up GitHub Actions pipelines that run the suite against a staging environment, with 4x parallel sharding (~8-minute full runs), quality gates, and release-readiness sign-offs.
- Helped move release cadence from bi-weekly to weekly with zero production rollbacks.
- Caught ~40 defects in staging; customer-reported issues dropped ~30% quarter over quarter.
- Defined the QA process from scratch: test planning, epic structuring, QA roadmap, and quality gates across CMS and web projects.
- Automated test-report publishing: reports are stored and published via AWS S3 and distributed to stakeholders by email and Slack.
- Built AI agents that support the flow from test-case creation to Playwright automation: AI-generated test cases, then AI-generated Playwright scripts based on those cases.
- Designing and building LLM evals for an AI chat system used by end users (in progress).
- Building a QA Workspace: a central hub for all test information (test cases, test plans, test run reports, E2E tests, escaped bugs) that gives the whole team visibility and organizes QA data so AI agents can access it easily (in progress).
- Trained 3 developers to write and maintain Playwright specs, spreading test ownership across the team.
- Combine automated regression with targeted manual and exploratory testing in staging on new and legacy surfaces, using Chrome DevTools for debugging; report coverage and test-health metrics to inform release decisions.

Founder & Developer (side project) — Peter Souza Dev (AutoVendas) · Self-employed · Remote
Sep 2025 – Present

- Building AutoVendas, a WhatsApp sales assistant for Brazilian car dealerships that qualifies leads, using LangChain with a multi-agent design and voice-message handling. First paying client currently in pilot.
- Own the work end to end: agent orchestration, prompt design, a simple evaluation harness to check conversation quality, and deployment.

QA Engineer — WTEC Energy · Hybrid (Linhares, ES)
Jan 2024 – May 2025

- Built and maintained test automation, mainly with Playwright and Jest, plus Cypress and JUnit tests on existing projects; reached 76% coverage and reduced production bugs by 35%.
- Designed API test suites for .NET, Node.js, and Java microservices behind transactional systems with 2,000+ daily users; ran them in Bitbucket Pipelines for continuous validation.
- Built two internal AI tools with LangChain + RAG over internal documentation: one generates unit-test scaffolds for developers (used to add coverage to legacy modules), the other checks Jira tasks against team structure standards. Together they cut manual QA effort by 20%.
- Implemented Zephyr Scale for traceability across test cases, executions, and Jira tickets; aligned QA work with developers and stakeholders.

QA Analyst / SRE — CI&T · Remote
Jun 2022 – Dec 2023

- Worked on a team that built and maintained AWS-based test infrastructure integrated into CI/CD, enabling parallel test runs across multiple environments at lower infrastructure cost.
- Maintained automated unit and functional tests across 14+ microservices with JUnit, contributing to 92% coverage (JaCoCo) and steadier releases.
- Automated functional and regression tests for large-scale web and mobile apps using Jest, Cypress, Selenium, and Appium; helped migrate selected flows to Playwright for stability and speed.
- Validated data integrity and integration behavior across MongoDB and MySQL data stores.
- Investigated and resolved 100+ production incidents using Dynatrace: root-cause analysis, runbooks, and post-mortems; ran internal workshops on CI/CD and incident handling.

Frontend Developer / QA Analyst — Fuerza Studio · Remote
Jun 2021 – Jun 2022

- Built responsive UI components with HTML, SASS, JavaScript, React, and WordPress; supported QA cycles with cross-browser functional and regression testing alongside designers and developers.

EDUCATION

Bachelor's in Systems Analysis — Universidade Anhembi Morumbi
Oct 2022 – Oct 2026 (final year)

Certified Tech Developer Program — Full-Stack (Java & React) — Digital House Brasil
May 2021 – May 2022

LANGUAGES

English: Advanced (professional working proficiency) · Portuguese: Native · Spanish: Basic
